Problem statement: Imagine you are in charge of choosing a restaurant for a company lunch. There are a variety of options for restaurants, and each employee has different tastes and budgets. Your job is to find the restaurant that will best match everyone's requirements. Below is a list of example restaurants and people at the company. Write a function that will determine the best restaurant for this group of people.

<u>Restaurants</u>

Name	Cuisine	Price
Pot Hot	Hot Pot	$
Hut Pizza	Pizza	$$$
Sourgreen	Salads	$$

<u>People</u>

Name	Food Preference	Budget
Jon	Hot Pot	$$$
Sam	Pizza, Hot Pot	$$
Dan	Salads, Pizza	$
